MEMO FOR FILE

FROM: Brian L Buttazoni, Division of Environmental Affairs

SUBJECT: Delta Diablo Sanitation District and City of Antioch Recycled Water Project

On July 9, 2007, Reclamation approved a Finding of No Significant Impact (FONSI # 07-06-MP) and Supplemental Environmental Information for the Delta Diablo Sanitation District and City of Antioch Recycled Water Project (Project).

On October 20, 2009, Reclamation received an Amended FONSI for the Project. Minor changes and additions to the Project were made and are as follows (see Figure 1):

- Change in the alignment for a portion of the pipeline route along Lone Tree Way to Worrell Road and Sunset Lane;
- Slip-lining of the abandoned 18-inch raw water line with 12-inch pipe between 10th Street and Worrell Road;
- Use of trenchless construction techniques along 10th Street at West Antioch Creek;
- New raw water and drainage improvements at Lone Tree Golf Course;
- EBMUD and CCWD canal crossings via open cut trenching;
- Revised storage tank and pump station locations;
- Minor increases in pipe diameter(s) at various pipeline segments; and
- Change in DDSD Place of Use.

On February 1, 2010 Reclamation received concurrence from the State Historic Preservation Officer that the revised project description and Area of Potential Effect would have no Affect to Historic Properties under 36 CFR Part 800.4(d)(1).

Upon review of the original FONSI, the Amended FONSI and revised project description, Reclamation has determined that the Project has not significantly changed that would trigger further evaluation or analysis of the Project's potential impacts, therefore no further action is necessary.
